

Facts About CAT 2013

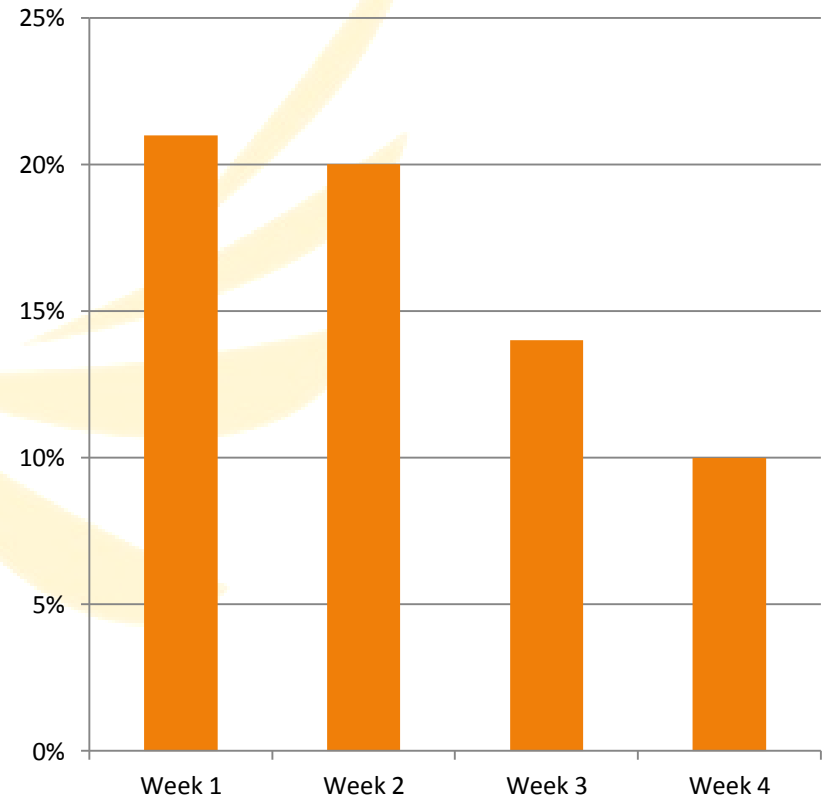

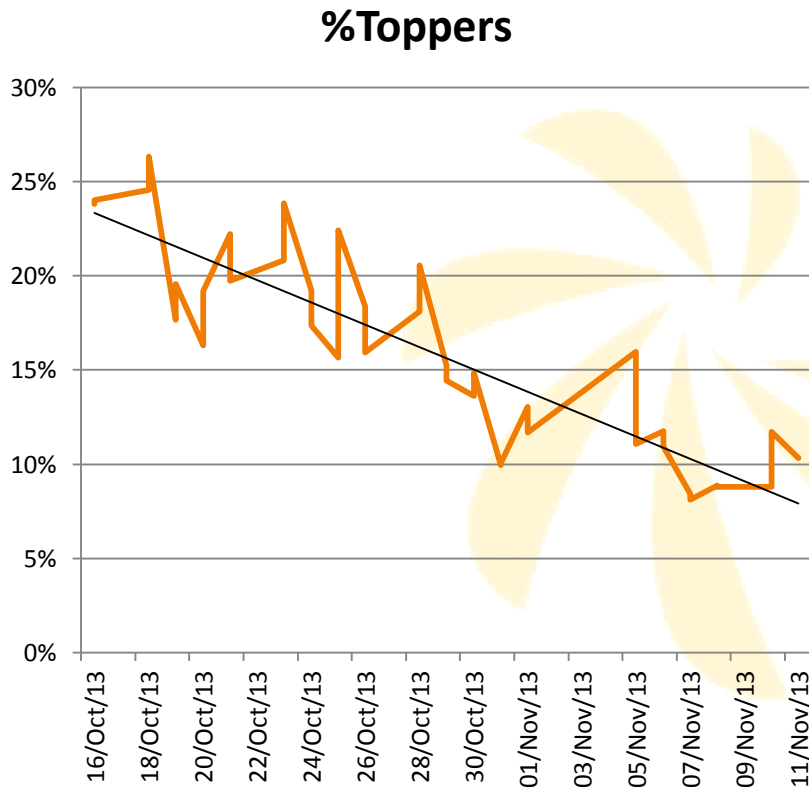

**A Research Findings Report
by the CL Academic Team**

FACT #1 Toppers take the CAT Earlier

Percentage of toppers across CAT slots

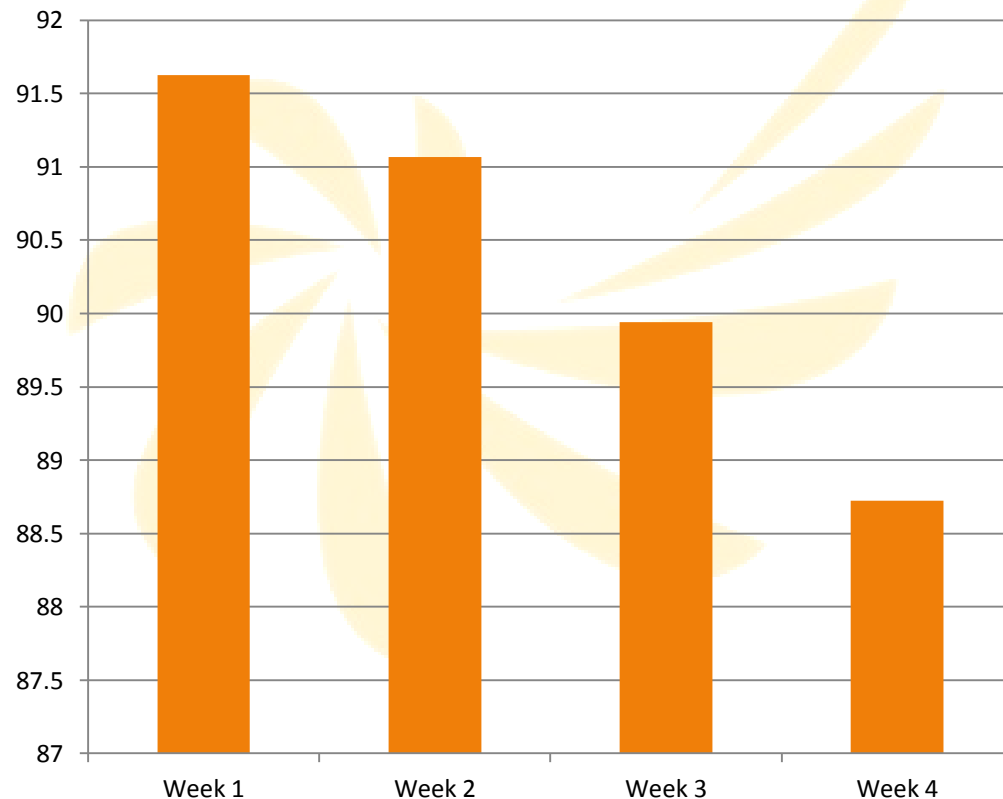

Percentage of toppers week-wise

* Toppers = Average 90%ile or more in multiple mocks

FACT #2 Better Students take the CAT Earlier

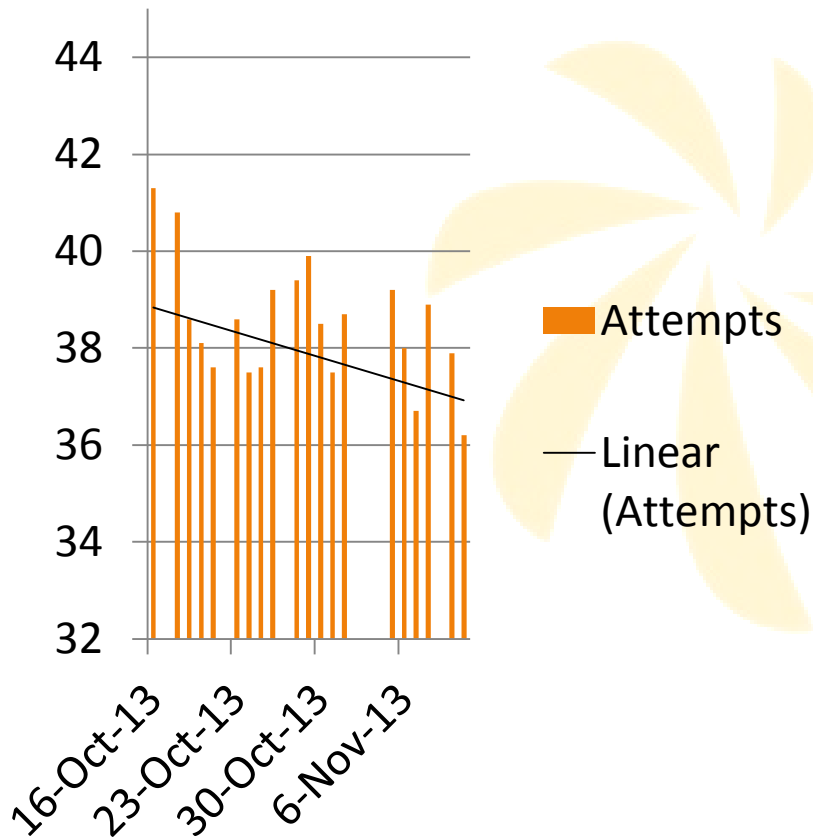

ProcMock Percentiles of CAT Takers (Week-wise Average)

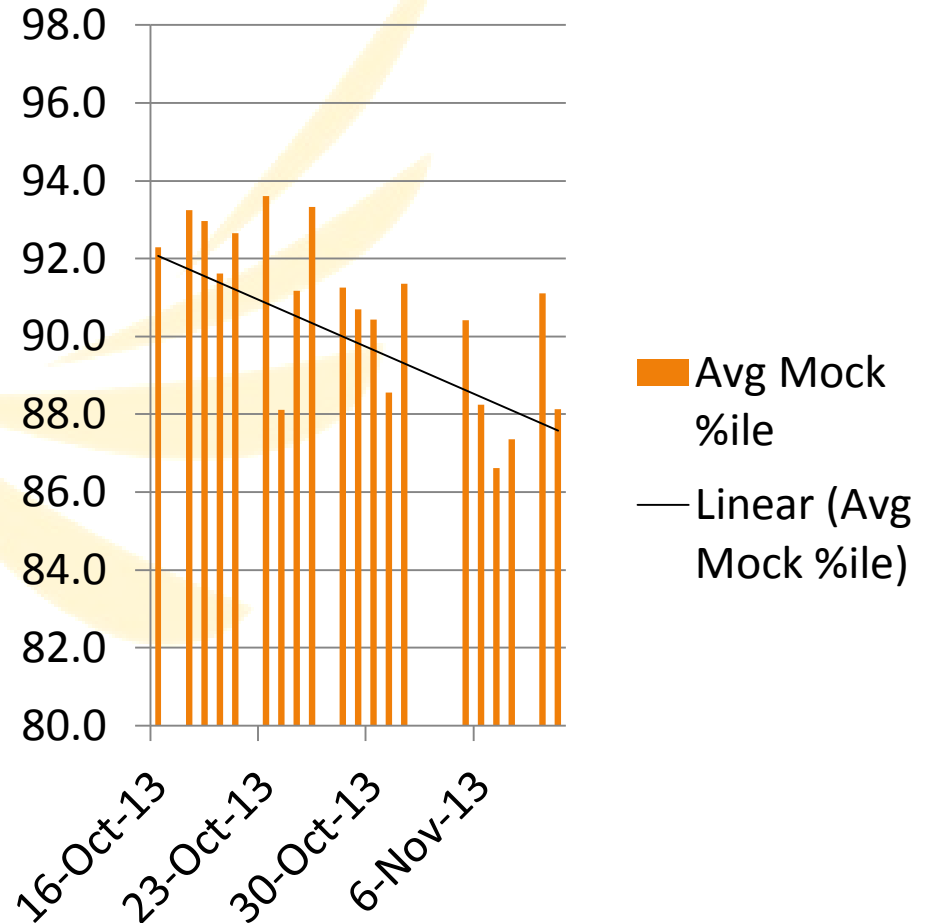

Based on analysis of 8000 students whose admit cards data was validated

Fact 3: Trend of Attempts & Test Taker Abilities are matching

Slot Wise Average Attempts

Slot Wise Students Mock %ile

Observations

- *The number of attempts averaged 37.1 overall CAT Takers*
- *Slot Wise Average Attempts were broadly in range of 37 to 42 in each slot*
- *The difference between the max & min of average attempts in any slot is 5 overall attempts*
- *The variations broadly correlated with the quality of test takers decreasing over the CAT window*

Conclusion

- The trend suggests that ‘better’ students have taken the CAT in the first 2 weeks
- The changes in slot wise averages whenever significant, correlate to the change in the quality of test takers for that slot

Final Conclusion: The question paper difficulty was similar in each slot on the average and hence unlikely to be normalized across slots
